

PROFILE

Leveraging strong communication and teamwork skills honed in healthcare, I transitioned to IT in 2021 as a QA Engineer at Brightest.

My focus on continuous improvement drives me to actively gather stakeholder feedback for software enhancements.

I collaborate effectively with developers to troubleshoot bugs, implement solutions, and streamline testing workflows through process optimization and automation.

A proponent of open-source solutions and efficient practices, I identify cost-effective alternatives to expensive tools and actively seek opportunities to expand my technical expertise in unit, API, and other relevant testing areas.

Sharing knowledge is important to me, so recently, I developed a training course on the Playwright testing tool, soon to be offered by Brightest.

My professional drive extends beyond the workday. I maintain a strong interest in technical advancements, dedicating personal time to explore areas such as electronics, embedded coding, and AI. This ongoing exploration fuels my passion for innovation and informs my professional approach.

ROBBERT CHAMPAGNE

QA ENGINEER
